- Project & Team Management

## Projects & Research:

**RUNod Ayat 2026 Half Marathon – Registration with Google Apps Script Back End**
*JCI Candon Gold Leaf* -2026 | jcicandongoldleaf.org

- **Charity Race Registration & Verification Platform**: Developed a full-stack, web-based platform featuring a responsive frontend landing page, dynamic category viewer, self-service participant lookup, and an integrated registration form that handles base64 receipt uploads. Engineered a serverless backend using Google Apps Script to manage database records, process asynchronous submissions, assign bib numbers, and render QR-coded digital event passes.
- **Admin On-Site Race Management Dashboard**: Built an admin web application integrated with live camera QR scanning via html5-qrcode and manual search capabilities to query participant data. Implemented automated REST endpoint actions to verify runner payment status, track race-kit distribution logs, update completion status, and trigger e-certificates in real time.

**Lightweight Online Bouquet Ordering and Lead Generator with Google Apps Script Back End**
*MJ Flowers PH* – 2026 | mjflowerdemo.netlify.app

- **Automated Customer Email Receipts**: Every new inquiry is automatically logged into a Google Sheet in real-time for clean lead management
- **Instant Database & Emailing Sync:** Customers immediately receive an automated confirmation email acknowledging their request and letting them know a representative will call them shortly.

**Brew&Go: Online Ordering System with Admin CRUD – Kanban Workflow**
*Personal Project*-2026

- Engineered a responsive, single-page web application using Vue.js 3, Tailwind CSS, and Supabase (PostgreSQL) to handle guest ordering, GCash receipt uploads, and dynamic 5-digit claiming reference codes.
- Built a secure admin management dashboard featuring an interactive, drag-and-drop Kanban workflow for live order processing alongside a full CRUD inventory system supporting quantity tracking and availability toggles.

**Agridam: IoT Early Flood Risk Monitoring and Alarm System**
*Undergraduate Thesis,* UNP 2023

- Developed an IoT-based system to monitor flood risks and provide early warning alerts for communities.
- Integrated real-time sensors and cloud-based monitoring for disaster preparedness.
- Researched sustainable tech applications to support climate resilience and public safety.
